

RUSTOSCALE[®] 186

Steam Boiler Treatment

- One product does the work of three:
 - Minimize scale and corrosion
 - Inhibit oxygen pitting
 - Inhibit condensate and steam line corrosion
- Convenient, ready-to-use liquid

General Description

Rustoscale 186 provides one product protection for your boiler, steam and condensate return lines. No mixing or time-consuming measuring of multiple product treatment programs.

Specifications

Wt/Gallon:	10.09 lbs
pH:	Greater than 11.5
Specific Gravity:	1.20
Appearance:	Clear, liquid

- Meets FDA Regulation CFR Title 21 Part 184.1631

Handling

Recommended storage limit is 18 months.
Keep container closed when not in use.

Applications

The amount of **Rustoscale 186** will vary depending on the analysis of the make-up water. It may be necessary to supplement with **Oxytrol** to provide proper oxygen control. **Rustoscale 186** can be added on a periodic basis through a bypass feeder on the makeup or feedwater line. For high makeup boilers, an alkali resistant chemical feed pump is recommended.
