

RUSTOSCALE[®]

186

Steam Boiler Treatment

- One product does the work of three
 - Minimize scale and corrosion.
 - Inhibit oxygen pitting.
 - Inhibit condensate and steam line corrosion.
- Convenient, ready-to-use liquid.

General Description

Rustoscale 186 provides one product protection for your boiler, steam and condensate return lines. No mixing or time consuming measuring of multiple product treatment programs.

Specifications

Wt/Gallon:	10.09 lbs
pH:	Greater than 11.5
Specific gravity:	1.20
Appearance:	Clear, liquid

- Meets FDA Regulation CFR Title 21 Part 184.1631

Handling

Recommended storage limit is 18 months.
Keep container closed when not in use.

Applications

The amount of **Rustoscale 186** will vary depending on the analysis of the make-up water. It may be necessary to supplement with **Oxytrol** to provide proper oxygen control. **Rustoscale 186** can be added on a periodic basis through a bypass feeder on the makeup or feedwater line. For high makeup boilers, an alkali resistant chemical feed pump is recommended.
